## SUMMARY

My focus is on frontend development, but I also enjoy working with backend when needed. I like creating solutions that solve real-world problems, technology is just the tool. Over the past few years, I've been turning prototypes into real experiences while always striving to keep code quality high.

I have experience working remotely in agile environments and with distributed teams, and I'm always looking for ways to grow, learn something new, and contribute meaningfully to the team's success.

Main technologies: JavaScript/TypeScript, React, Node.js

## EXPERIENCE

### *Cantu Inc, Senior Frontend Engineer*

Oct 2024 - Present

After Verum (the startup where I had my first experience) was acquired by Cantu Inc., I returned to the team and have been working on strategic projects, supporting cross-functional teams, and delivering high-impact solutions.

- Verum Sales / Custom CRM: Refactored the entire system for mobile-first using TailwindCSS, improving usability and responsiveness.
- Verum OMS / Omnichannel & Marketplaces: Developed new features and initiated migration from CRA(Create React App) to Vite using Module Federation without DOM shared for a seamless transition.
- Verum Commerce / E-commerce (React Native): Built and tested new features for the mobile platform.
- Verum Supply / Supply Platform (Vite/TailwindCSS): Worked as the sole front-end developer on a project where one of the main challenges was to leverage AI (Claude Code) as a coding assistant. Collaborating closely with the back-end developer, we accelerated development and launched the MVP within just 2 months. This project also allowed me to explore practical applications of AI in modern development, boosting productivity and efficiency.

Key Impact: Proven ability to adapt quickly to new projects while ensuring strict adherence to coding and architectural standards. Worked across multiple teams to accelerate high-priority deliveries.

### *Neogrid, Senior Frontend Engineer*

Oct 2022 - Oct 2024

TradeForce (B2B Logistics Platform)

- Developed tracking features using Google Maps API, React, and TypeScript.
- Refactored and improved legacy code, enhancing system stability.

### EDI Platform

- Full-stack role (frontend-heavy) using React, TypeScript, React Query, Zustand.
- Backend in Java, Spring Boot, Azure, CosmosDB.
- Developed new features at backend and frontend

Key Impact: Worked on various critical demands, filling gaps where the team needed support.

- Contributed to automated testing,
- Legacy Java code vulnerability fixes, successfully achieving the goal of eliminating all high and medium vulnerabilities.
- Developed new backend features with Java, fully adapting to the team's needs.

### *Banco Bradesco, Frontend Engineer (Allocated by NTT DATA)*

Jun 2022 - Oct 2022

I worked as a frontend developer for Bradesco, allocated by NTT DATA, in one of the squads.

I developed new features, fixed bugs, and wrote tests. My routine was based on SCRUM ceremonies such as Planning, Daily, Review, Retrospective, and code reviews.

At NTT I participated in technical interviews, helping HR team to hire new frontend developers.

### *Verum Store, Frontend Engineer*

Oct 2020 - Jun 2022

Started as a Junior Developer, later led frontend decisions and contributed to a new React Native project.

Built and optimized features for web & mobile using React, React Native, TypeScript.  
Led frontend development for SSO login, real-time notifications (SignalR), and a lot of different features.  
Conducted technical interviews and mentored new frontend developers.

#### Key Impact:

I took on various frontend demands, serving as the lead frontend developer and, at a critical stage for the startup, handling the entire frontend development independently. I was responsible for building and delivering all the necessary features for a highly robust project.

## EDUCATION

---

*Universidade Paulista*

*Bachelor's degree • Computer Science • 2013 - 2017*

## LICENSES & CERTIFICATIONS

---

### ***Ignite - ReactJS***

*Rocketseat • 1138deed-e2a0-4d6f-ab05-351aff83caf9 • Issued Aug 2021*

### ***EF SET English Certificate 64/100 (C1 Advanced)***

*EF SET • Issued Mar 2022*

### ***Object Oriented Programming - Java***

*Alura • 37a89422-57e7-4c4a-9294-d471a9d562eb • Issued Oct 2023*

## SKILLS

---

Zustand • React • TypeScript • React Native • Python (Programming Language) • Django • Next.js • Java • Docker Products • Amazon EC2
